

Codefez 2.2 Programming Worksheet 3

It costs £10 per adult and £6 per child to play laser tag. Write a function called $\mathsf{game}_\mathsf{cost}$ that takes the number of adults and children as an argument.

If the number of adults is over 4, the discount for adults is 20%. If the number of children is over 5, the discount for children is 25%. The function should return an array/list with 3 elements; total_for_adults, total_for_children and grand_total.

1 Write the code for the problem above

[7]

2 Call the function with 6 adults and 16 children as arguments and print the result.
